Moin and Welcome

to us in Westholstein!

We are the Economic Promotion Company in the districts of Dithmarschen and Steinburg and the City of Brunsbüttel – a vivid region with strong industrial sectors and much potential for the future.

Our homeland belongs to the Hamburg Metropol Region with the largest industrial area in Schleswig-Holstein, well respected research and education centers and ideal traffic connections, be it by water, by rail or road.

9,156 Mio. Gross Domestic Product

100 % vitality

Settlement and

Setting up Business

We practice industrial site management from conviction and actively promote settlements of new businesses in our region. We also support foundation of companies and their founders by providing space for success in our CAT and mariCUBE foundation centers by coaching and supporting to optimise enterprise models and by brokering contacts. Moreover, an important pillar is our subsidy advice. ■

Occupation

and Education

Qualified specialists are essential for competitive capacity of our local economy. More than that: only by opening perspectives and career possibilities in our region, we'll succeed to establish the area as a growing and attractive location with high quality of life in the long run. Therefore, our project work is based on keeping our junior staff by promoting advanced training and by using women's potential on the labour market even better. ■

Company

Development

Being the point of intersection between regional development, politics and economy, we as provider of advice and impulses accompany enterprises with their projects. This includes sound advice on complex funding programmes. Hence we, all the innovation enthusiasts, always aspire to act in a progressive manner, and actively work on important future issues, like e. g. digitalisation and shortage of specialists. Being the experts about funding programmes we prepare companies to push counselling and change processes. ■

Technics

A well-developed and functioning infrastructure fit for the future, is the best precondition for economy and growth. Therefore we, in our own business unit, egw:technik, make sure everything stays in flow, in the best sense of the word. Be it water, energy or data. That's why we apply ourselves to both, the operational management for the Wacken waterworks special purpose association and the Dithmarschen broadband special purpose association. Together with Brunsbüttel municipal works, we develop concepts for use of industrial waste heat and, in addition, make our technical services and know-how available to partner companies and enterprises. ■
